Education

Brooklyn College

Bachelor of Science in Computer Science

May 2026

Brooklyn, NY

Skills

Programming Languages: JavaScript, Java, SQL, C++, HTML/CSS

Frameworks & Technologies: React, Node.js, Vite, React Router, Tailwind CSS

Databases & APIs: Supabase, MariaDB, JDBC, REST APIs

Tools: Git, GitHub, VS Code, Puppeteer

Experience

Candogram

Software Developer

June 2026 – Present

New York, NY

- Built and integrated features within an existing full-stack resume platform, working across Vue.js frontend components, Node.js backend APIs, and a multi-service codebase.
- Developed a server-side resume generation pipeline using Puppeteer and HTML templates to render optimized resume data into downloadable PDFs.
- Implemented resume customization workflows for template selection and one-page, two-page, or automatic document length, connecting frontend controls to backend generation logic.
- Added automated page-count verification with Puppeteer and dynamically adjusted template density when generated resumes exceeded the requested page length.
- Developed multiple resume templates with configurable layout density levels to balance readability, content coverage, and strict page-length requirements.
- Integrated PDF preview and download functionality on the frontend by requesting generated documents from the API as binary blob responses.

CUNY Tech Prep

Full-Stack Development Fellow

June 2025 – June 2026

New York, NY

- Selected for a competitive year-long software engineering fellowship focused on full-stack development and technical interview preparation.
- Built full-stack applications using React, JavaScript, Node.js, relational databases, REST APIs, Git, and GitHub.
- Worked in team-based development environments while practicing data structures, algorithms, debugging, and technical problem solving.

Projects

Game Backlog Tracker | *React, JavaScript, Vite, Supabase, Tailwind CSS*

2026

- Developed and deployed a web application for tracking game backlogs, wishlists, completion status, and personal gaming data.
- Integrated the RAWG API and implemented search, filtering, detailed game pages, routing, and dashboard visualizations.
- Used Supabase for persistent data and built reusable React components with React Router.

Spoty | *React, JavaScript, Supabase, SQL*

2025

- Built and deployed a full-stack application for creating, tagging, and sharing location-based pins on an interactive map.
- Implemented authentication, relational data storage, database-backed features, and responsive React components.

Movie Recommendation App | *Java, JDBC, MariaDB, SQL*

Spring 2025

- Designed a normalized relational database with 10+ tables and built a Java/JDBC application to query and update movie data.
- Implemented SQL recommendation queries based on user history and preferences.
